Project Udyam Digital
Making India's 6 Crore+ Small Businesses Go Digital in One Sitting
End-to-End Digital Acquisition, Instant Smart KYC, AI Advisor & Partner Co-Existence
Platform Partner unstop

EXECUTIVE CONTEXT & PROBLEM STATEMENT

The 6 Crore+ MSME Opportunity & Existing Friction

MSMEs need bundled digital services, but current B2B enterprise sales models are slow, manual and expensive.

6 Crore+
India MSME Market
Rapidly adopting UPI, CCTV & Cloud

₹15,000
Current Blended CAC
Against ₹6,900 median monthly spend

17.6 Days
Avg. Time to Activate
Requires 3-4 customer follow-ups

7.36%
Funnel Conversion Rate
368 activations from 5,000 leads

The Customer Friction Today

- Fragmented Purchasing: Kiranas & clinics buy broadband, SIMs, CCTV, POS, and email from 4-5 different unorganized vendors.
- Sales Call Friction: Discovery relies on manual field visits; sales executives push quota products rather than customer needs.
- Opaque 3-5 Day Quotes: Delivered as static PDFs loaded with technical telecom jargon that business owners cannot parse.
- Manual KYC Hassle: Physical paper collection of GSTIN, Udyam, utility bills, and signatory IDs causes major drop-off.

The Udyam Digital Paradigm Shift

- One-Sitting Onboarding: Transition from a 17.6-day manual cycle to a 10-minute self-serve or partner-assisted digital journey.
- Conversational AI Advisor: Multilingual (Hindi/English) voice & chat guided needs discovery replacing pushy sales pitches.
- Instant Smart KYC: Real-time GSTIN/Udyam prefill + automated OCR with 90-day validity checks and DPDP Act 2023 compliance.
- Partner Symbiosis: Field force empowered with high-propensity leads and installation tasks, eliminating channel conflict.

FUNNEL FORENSICS & DATA INSIGHTS

Where & Why 92.6% of Leads Drop Off (5,000 Lead Analysis)

Deep analysis of the supplied synthetic leads dataset reveals that friction in quote and scheduling drives the steep drop.

1,200+ Leads
Process Friction Drop-offs
No time for visit, quote delay & complexity

44% Acceptance
Needs to Quote Accepted
Steepest funnel cliff in the acquisition cycle

9.6% vs 2.0%
GSTIN vs Non-GSTIN Conv.
Leads with GSTIN convert 4.8x higher

3 Calls
Status Chases per Lead
Avoidable customer support load

Drop-Off Root Cause Breakdown

- Unreachable / Scheduling Failure (1,631 leads): 805 unreachable after 3 attempts; 531 owners had no time for visit; 296 visits not scheduled.
- Quote Complexity & Delay (385 leads): 206 dropped because 'Quote too complex to understand'; 179 dropped due to quote turnaround latency.
- Product & Price Mismatch (621 leads): 414 dropped on price; 207 picked competitor; 280 only wanted a mobile SIM (poor upfront qualification).
- Key Takeaway: Over 40% of lost leads are directly addressable through instant digital quoting, self-service, and proactive ETA tracking.

Funnel Stage Attrition (smb_leads.csv)

- Stage 1 - Leads Generated: 5,000 (100%)
- Stage 2 - Contacted: 3,406 (68.1% of leads) — 1,594 lost before first dialogue
- Stage 3 - Needs Assessed: 1,974 (58.0% of contacted) — 1,432 lost in visit coordination
- Stage 4 - Quote Accepted: 861 (43.6% of assessed) — 1,113 lost to quote friction
- Stage 5 - KYC Complete: 588 (68.3% of accepted) — 273 lost to paperwork hassle
- Stage 6 - Activated: 368 (62.6% of KYC) — 220 lost to install delays & dropouts
- Core Lever: Digital Advisor & Instant Quote fixes the Stage 3->4 bottleneck!

CUSTOMER STRATEGY & SEGMENTATION

Target Customer Segmentation & Prioritization Matrix

Balancing conversion velocity (Professional Offices) with market scale (Micro Retail) to maximize blended ROI.

Segment Performance & Priorities

- Priority 1: Professional Offices (Clinics, CA Firms, Coaching)
- • Metrics: 1,247 leads (25% share) | 138 activated | 11.1% conversion rate.
- • Needs: High uptime broadband, cloud email/storage, device endpoint security.
- • Fit: High digital readiness, GSTIN-registered, medium price sensitivity.
- Priority 2: Small Multi-Site Businesses (Retail Chains, Restaurants)
- • Metrics: 755 leads (15% share) | 83 activated | 11.0% conversion rate.
- • Needs: Centralized billing, failover backup, SD-WAN, Cloud CCTV across outlets.
- • Fit: High ARPU, urgent need for unified vendor management.
- Priority 3: Micro Retail & Services (Kiranas, Salons, Pharmacies)
- • Metrics: 2,709 leads (54% volume) | 110 activated | 4.1% conversion rate.
- • Needs: Ultra-reliable internet for UPI/POS, WhatsApp Business channel.
- • Fit: Massive market pool; needs self-serve low-touch pricing under ₹2,000/mo.
- Partner Assisted Pilot: Small Manufacturers (Auto-parts, Textiles)
- • Metrics: 289 leads (5%) | 37 activated | 12.8% conversion rate | 20.5 days SLA.
- • High ARPU leased line + IoT, but requires technical partner on-site feasibility.

Tailored Go-To-Market Bundles

- Micro Retail Starter Pack (~₹1,848 / month):
- • Products: Biz Fibre 100 (P01) + Cloud POS (P19) + WhatsApp API (P15).
- • Value Prop: Never miss a UPI payment; automate customer receipts on WhatsApp.
- • Setup: ₹2,500 one-time | 12-month contract | Instant digital activation.
- Professional Office Suite (~₹2,423 / month):
- • Products: Biz Fibre 300 (P02) + Cloud Email/Office (P16) + Endpoint Security (P20).
- • Value Prop: 300 Mbps symmetrical speed + data protection for client records.
- • Setup: ₹0 setup fee | 12-month contract | DigiLocker KYC verified.
- Multi-Site Connected Enterprise (~₹5,998+ / month):
- • Products: Biz Fibre 300 (P02) + 4G/5G Failover (P09) + Managed SD-WAN (P10).
- • Value Prop: Seamless branch inter-connectivity with 99.9% uptime SLA.
- • Setup: Scaled per site | 24-month SD-WAN term | Dedicated partner dispatch.

CATALOGUE RULES & TRANSPARENT PRICING

Product Bundling Architecture & Dynamic Quote Engine

Grounding recommendations in catalogue constraints, enforcing dependencies and eliminating hidden charges.

25 Products
Catalogue Portfolio
Connectivity, Cloud, Security, IoT

100% Rules-Based
Zero Hallucination
Strict city tier & employee constraints

Real-Time MRC/OTC
Transparent Checkout
Clear monthly vs one-time setup split

28% Avg. Savings
Consolidated Value
Versus fragmented multi-vendor contracts

Catalogue Dependency & Eligibility Engine

- City Tier Filtering: Restricts Tier 1-exclusive products (e.g. Biz Fibre 1G P03) to eligible geographies.
- Size & Facility Constraints: Enforces min_employees and min_sites (e.g. SD-WAN P10 requires >=10 staff & >=3 branches; Cloud Telephony P12 requires >=3 staff).
- Base Connectivity Enforcing: Strictly checks 'requires_one_of' rules before allowing add-ons (e.g. Failover P09, Firewall P21, and CCTV P23 require an active broadband/leased line).
- GSTIN Prerequisites: Restricts enterprise-grade products (ILL P05/P06, SD-WAN P10, Machine IoT P24) when valid GSTIN is absent.

Transparent Digital Billing Experience

- Unit Multiplication: Transparently scales pricing per user (Email P16), per line (SIMs P07/P08), per camera (CCTV P23), and per counter (POS P19).
- Contract Tenure Transparency: Clearly displays binding contract terms (1, 3, 6, 12, 24 months) so customers have zero exit surprise.
- Interactive Add-on Toggles: Owners can toggle security, backup, or toll-free numbers and watch the bill adjust in real-time.
- Unified Bill Guarantee: Single GST invoice, single consolidated payment, single point of enterprise customer care.

DIGITAL DISCOVERY EXPERIENCE

Conversational GenAI Advisor & Multi-Channel Discovery

Allowing business owners to discover right-sized solutions via natural voice or chat in Hindi and English.

Conversational AI Discovery Architecture

• Bilingual Voice & Text AI:

• • Supports English, Hindi (हिंदी), and Hinglish voice queries via Web Speech API.

• • Example: 'Jaipur me 5 logo ka clinic hai, patient data safe rakhna hai aur tez net chahiye'.

• Natural Intent & Entity Extraction:

• • Identifies business type (clinic -> professional office), location tier, staff count, and security priorities without making the user fill tedious dropdowns.

• Plain Language Business Justification:

• • Avoids technical jargon like 'CIR 1:1' or 'IPSec tunnel'.

• • Explains: 'Biz Fibre 300 gives your 5 staff uninterrupted video consultations, and Endpoint Security protects your patient records against ransomware.'

• Dual Discovery Flow:

• • Conversational mode for interactive exploration + Quick Wizard mode for high-speed automated selection.

WhatsApp Integration (Stretch Goal)

• Familiar WhatsApp Front-End:

• • India's MSME owners live on WhatsApp. Udyam Digital offers an end-to-end interactive journey directly inside WhatsApp.

• Step-by-Step WhatsApp Flow:

• 1. Inbound greeting: 'Namaste! Main Accel Business Digital Advisor hoon.'

• 2. Needs discovery: Quick-reply buttons for business segment, staff count, and internet needs.

• 3. Interactive Bundle Card: Shows monthly price, setup fee, and instant customization links.

• 4. In-Chat KYC Upload: Snap and upload GST certificate or electricity bill directly in the WhatsApp thread.

• 5. Real-Time Status Push: Automated tracking notifications sent to WhatsApp as installation progresses.

• Significantly lowers barrier to entry for micro and small enterprises.

TRUST, COMPLIANCE & AUTOMATION

Smart KYC & DPDP Act 2023 Compliance Framework

Near-instant verification combining mock registry lookups and automated OCR with privacy by design.

30 Seconds
Verification Speed
From 4-5 days paper collection

6,257 Records
Mock Registry DB
3,534 GSTIN + 2,723 Udyam entries

90-Day Rule
Address Recency Check
Validated against 2026-07-15 anchor

100% DPDP
Privacy Compliant
Explicit purpose-specific consent

Smart Verification Pipeline

- 1. Instant Registry Prefill: Queries mock GSTIN/Udyam database; auto-populates legal name, trade name, constitution, and verifies 'Active' status.
- 2. Automated Document OCR: RapidOCR ONNX engine extracts text from uploaded certificates, utility bills, and signatory IDs.
- 3. Automated Anomaly Detection: Catches planted issues (e.g. utility bill older than 90 days from 2026-07-15, cancelled GSTIN status, signatory name mismatch).
- 4. Smart Exception Routing: Clean applications pass instantly; flagged anomalies are routed seamlessly to field partners for assisted resolution.

DPDP Act, 2023 Alignment

- Notice & Purpose Limitation: Explicit affirmative consent obtained solely for Accel Business onboarding; no bundled marketing consent.
- Data Minimization: Collects only statutory identifiers necessary to provision service; extracts only relevant fields from documents.
- Data Masking: Masked display in UI and logs (e.g. 08YKZXS****1Z0; masked Aadhaar/PAN) to prevent accidental data leaks.
- Storage Limitation: 90-day operational retention cap for raw KYC document images; subsequent deletion leaving only cryptographically hashed audit logs.

CHANNEL STRATEGY & CO-EXISTENCE

Field Force & Channel Partner Symbiosis

Empowering local partners and sales executives as high-value assisted onboarding and installation champions.

Transforming Channel Friction into Value

• The Traditional Threat: Digital channels often trigger resistance from sales agents and channel partners fearful of losing commissions.

• The Udyam Digital Model — Collaborative Assisted Sales:

• • Digital handles cold discovery, qualification, transparent quote generation, and initial KYC prefill.

• • Partners handle high-touch physical touchpoints: on-site fiber feasibility, hardware installation, CPE setup, and exception handling.

• Guaranteed Partner Commission Attribution:

• • Every lead generated through a partner link or assigned for local installation receives full commission attribution upon successful activation.

• Zero Cold Leads for Sales Executives:

• • Eliminates wasted visits to uninterested leads (which caused 1,300+ dropped leads in the legacy dataset).

• • Focuses field energy purely on qualified, ready-to-activate accounts.

Back-Office Partner Portal (Stretch Goal)

• Dedicated Partner Cockpit (backoffice.html):

• • Real-time visibility into local lead funnel and active installation tasks.

• ML-Driven Lead Propensity Scorer:

• • Ranks unclosed leads who dropped out during the self-serve journey.

• • Scoring weights: Has GSTIN (+40%), Professional/Multi-site (+25%), High Spend (+15%), Dropped at Quote (+20%).

• • Delivers prioritized '1-Click Call' lead lists to partner sales reps.

• Human-in-the-Loop KYC Exception Queue:

• • Applications with OCR discrepancies (e.g. name variance or outdated bill) are assigned directly to the local partner to collect fresh verification on-site.

• SLA Tracking & Dispatch:

• • Real-time engineer dispatch ensuring the 10-day activation commitment is met.

FINANCIAL MODEL & BUSINESS IMPACT

Unit Economics, CAC Reduction & Financial Returns

Transforming acquisition unit economics while unlocking high lifetime value across India's MSME base.

₹12,000
Projected Blended CAC
20% reduction from ₹15,000 benchmark

10.0%
Target Conversion Rate
Up from 7.36% baseline (+36% uplift)

10 Days
Target Activation SLA
Down from 17.6 days (-43% cycle time)

≤ 1 Call
Customer Status Chases
Down from 3.0 calls (-67% support load)

Financial Model & Cost Savings

- Baseline Economics (5,000 Leads Quarter):
- • 368 activations @ ₹15,000 CAC = ₹55.2 Lakhs total acquisition expenditure.
- • Median monthly bundle = ₹6,900 (Annualized revenue: ~₹3.05 Crores).
- Projected Udyam Digital Economics (5,000 Leads):
- • 10% conversion = 500 activations (+132 incremental customers / quarter).
- • CAC reduced to ₹12,000 = ₹60.0 Lakhs spend for 36% more customers.
- • Effective CAC per incremental customer drops substantially.
- • Incremental Annual Recurring Revenue (ARR): ₹1.09 Crores per quarter.
- Support Cost Avoidance: Eliminating 2 calls per lead across 5,000 prospects saves ~10,000 support minutes quarterly.

Payback & Customer Lifetime Value (LTV)

- Payback Period: With median bundle of ₹6,900/mo and gross margin ~65%, monthly gross profit is ~₹4,485. CAC payback drops from 3.3 months to 2.6 months.
- Churn Mitigation: 6-month churn target maintained at <= 2.5% through right-sized bundling (avoiding push-selling that leads to buyer regret).
- NPS Improvement: Proactive ETA tracking and zero bill shock targets raising NPS from 6.9 to >= 8.0.
- High Expansion LTV: Micro accounts on Biz Fibre 100 graduate to Cloud Email (P16) and Security (P20) as team size expands.

ROLLOUT STRATEGY & GOVERNANCE

8-Week Pilot Roadmap, Target KPIs & Risk Mitigation

A disciplined phased rollout in select Tier 1/2 clusters to validate hypotheses before nationwide rollout.

8-Week Phased Pilot Roadmap

- Phase 1: Pilot Preparation (Weeks 1-2):
- • Finalize API integrations for GSTIN/Udyam lookup & DigiLocker e-sign.
- • Select two pilot city clusters: Jaipur (Tier 2 hub) & Pune (Tier 1 hub).
- • Partner alignment: train 20 local channel partners on assisted back-office.
- Phase 2: Closed Beta Launch (Weeks 3-4):
- • Launch with Professional Offices and Micro Retail cohorts via digital inbound.
- • Test voice advisor accuracy in Hindi/English; monitor OCR exception rate.
- Phase 3: Multi-Site & Partner Expansion (Weeks 5-6):
- • Roll out multi-site bundle; enable partner propensity callback queue.
- • Measure activation cycle time and customer status chase frequency.
- Phase 4: Evaluation & Scale Readiness (Weeks 7-8):
- • Validate conversion rate vs control group; audit DPDP compliance logs.
- • Present pilot metrics to leadership for pan-India commercial rollout.

Target KPIs & Risk Mitigation Matrix

- Target Success Metrics (Pilot Hypotheses):
- • Lead-to-Activation: Raise from 7.36% to ≥ 10.0%.
- • Activation Turnaround: Reduce from 17.6 days to ≤ 10 days.
- • Customer Status Inquiries: Reduce from ~3 calls to ≤ 1 call.
- • 6-Month Customer Churn: Maintain at ≤ 2.5%.
- • Customer NPS: Improve from 6.9 baseline to ≥ 8.0.
- Risk Mitigation Strategies:
- • OCR / Registry Mismatch: Automated human-in-the-loop fallback to local partner.
- • Consent & DPDP Compliance: Granular affirmative consent, data masking & 90-day retention schedule.
- • Channel Conflict: Guaranteed commission attribution on digital leads.
- • Last-Mile Installation Bottlenecks: Dynamic SLA engine calculates realistic delivery dates based on catalogue install constraints.
